

The XOTOCAM has been developed for imaging, filming, surveying, commenting and archiving data in the clinical environment, easier and more reliable than ever before.

CUSTOMER OPINIONS

„The camera has become an integral part of our everyday clinical practice... It would be impossible to imagine working without the XOTOTEC System. Thanks to the new XOTOTEC system and the XOTOTEC interface a state-of-the-art, safe and fast documentation has become possible for our hospital.“

DR. PETER SABISCH

*Medical Director of the ASKLEPIOS Hospital Bad Tölz,
Chief Physician, Department of Vascular Surgery*

MEDICAL CAMERA

for mobile wound imaging and documentation

The wound imaging, measuring and documentation camera for medical facilities

Wound imaging, filming, measuring, commenting and documenting all in one - the multimedia quality assurance system combines the wound documentation and the medical image management into the workflow of the hospital.

Optimum illumination provides very high image quality

40 LEDs ensure consistent lighting across the wound area. An optimized automatic white balance guarantees optimum image results

Immediate image control on a large 7-inch display

Exact wound measurement and image dimensioning via a state-of-the-art ToF sensor

Docking-Station

A docking station guarantees the operational readiness of the medical camera by battery charge maintenance when not in use.

Complete automation

From the recording time of the image to patient allocation, direct connection to the hospital information system (HIS) and to the picture archiving and communication system (PACS), minimizes errors and ensures data security.

AREAS OF APPLICATION

- Emergency department
- Pathology
- Surgery
- Orthopaedics
- For wound documentation on peripheral hospital wards

XOTOCAM ist operable with surgical gloves.

THE ADVANTAGES

Disinfectable, wipe-resistant, impact-resistant

The complete disinfectability of the entire camera ensures compliance with all hygiene standards. The waterproof and impact-resistant housing with extremely resistant surface guarantees a long period of use.

- Simplify work processes
- Avoid unnecessary steps or movements
- Risks and sources of error are minimized
- Wound documentation and image management are significantly simplified
- Increased legal certainty by excluding potential manipulations and errors
- Avoidance of hygienic risks
- Complex image processing and data transfer is eliminated
